Hundreds of satisfied clients	YES	?

CONCRETE HARDSTAND - *The importance of getting it right*

Terazzo has been constructing concrete hardstands within commercial and industrial facilities for more than eight decades.

Our quality assurance processes are designed to ensure that the concrete hardstands that we construct are robust and fit for heavy vehicles and long-term use.

Clients trust in our experience, workmanship and expertise constructing concrete hardstands to meet any size and operational requirement.

CONCRETE HARDSTAND DESIGN

Design consideration is given to the structural capacity for a concrete hardstand to last over time, given the variety heavy vehicle use. Consideration is also given to stormwater drainage to make sure that surface water run-offs efficiently.

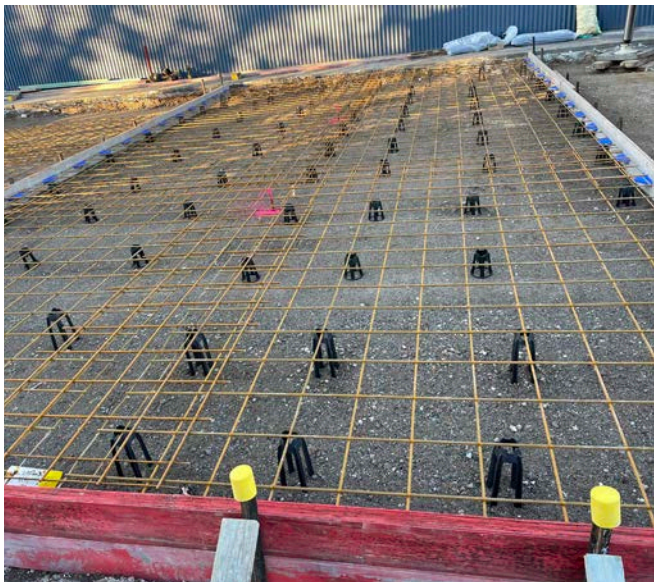
Terazzo provides both the structural design, and construction services for concrete hard stands as a professional, end-to-end service.

CONCRETE HARDSTAND REPAIRS

Concrete hardstands can deteriorate over time, particularly if they have not been designed to suit the client's operational requirements.

Concrete can corrode and ruts in hardstands can form that progressively deteriorate with heavy use. Cracks allow water to enter and deteriorate the sub-base, causing further deterioration.

Terazzo has experience and expertise in concrete hardstand repairs, no matter the size. This includes concrete cutting, removal of damaged areas, earthwork remediation, concrete joints, steel fixing, formwork, and concrete placement.



CONCRETE HARDSTAND CONSTRUCTION

Our experienced team are proficient in all forms of commercial concrete hardstand construction including the following aspects.

Quick project timeframes and minimal downtime is an important budgetary and operational factor for many clients. To minimise operational impact, we expertly plan every aspect for every job and can operate 7 days a week and outside of normal business hours when necessary.

A critical element of hardstand construction is ensuring the design is suitable for the intended application. Terazzo has the experience to ensure longevity of your hardstand.

Demolition and site preparation involves setting out and securing the site, concrete cutting, levelling and removal of spoil in preparation for concrete construction to commence. Terazzo is highly experienced in all elements of site preparation and always respectful of the operational and safety requirements of any site in which we operate.

Operational safety is of paramount importance when constructing hardstands, especially in working environments. Terazzo holds all necessary qualifications and licenses and takes seriously the personal health and safety of all staff, contractors, and clients, in, or around all project work sites.

COMPANY OVERVIEW

For 85 years, Terazzo has been a trusted industry leader in commercial concrete construction specialising in the project management and successful execution of highly complex and detailed projects, such as concrete hardstands and a range of commercial concrete structures.

The Terazzo management team includes a qualified construction manager and project engineer. We have the experience to deliver jobs with the technical precision and structural integrity required to provide for optimum performance and longevity of all forms of concrete hardstands.

Our clients appreciate our quality-assurance commitment to delivering an exceptional finished product with structural integrity, that ensures it is fit for purpose and built to last.

WHAT OUR CLIENTS SAY

Just wanted to say a BIG thanks to you and your guys on your safety, following our process, and your professionalism when you were on site. Great job and thanks again.

- Stephen, Service Centre Manager, Brisbane

All looks great. Thanks again for a job well done and for your hard work. The result is perfect and the quick turn-around on this project much appreciated.

- Mechanical factory, Rocklea

OUR PROVEN TRACK RECORD

Over the past 85 years of operation and service, Terazzo has completed numerous concrete hardstands for a variety of clients. Below are some recent examples and we are always happy to provide further information and complementary quotations.

BANDAG CONCRETE HARDSTAND

Brisbane

Terazzo constructed 900m2 of 200mm hardstand for this local, repeat client. The project required a very short time frame because the client wanted to use the Easter break as the curing time. The project had requirements for stormwater run-off. Terazzo met all the client's requirements for the delivery timeframe and stormwater run-off.

JAMES HARDIE CONCRETE HARDSTAND

Brisbane

Terazzo supplied and placed 11,200m2 of 200mm thick concrete hardstand. Careful planning and project management facilitated staged slab pours to allow James Hardie operations to have truck and forklift movement at all times.

DC ENGINEERING CONCRETE HARDSTAND

Brisbane

A new 400m2 hardstand construction was completed external to this Brisbane-based engineering facility. The project involved tight access and a staggered pour sequence to facilitate the required expansion joints as per engineering specifications.

OUR PROVEN TRACK RECORD

ALLNEX
CONCRETE HARDSTAND

Brisbane

This hardstand construction project was a replacement for an existing hardstand. The existing hardstand had no fall for stormwater due to being an environmental concern with chemicals manufactured onsite.

Terazzo replaced 700m2 of 200mm concrete hardstand, working out of hours over multiple weekends to meet operational requirements. The solution involved installing two new stormwater pits and trenching to direct contaminated stormwater water to a treatment facility.

PIPEMAKERS
CONCRETE HARDSTAND

Brisbane

Terazzo replaced 1000m2 of existing asphalt hardstand that had deteriorated. The asphalt was removed and replaced was a 180mm concrete hardstand. The handstand level was lifted to provide a flat storage option, facilitated through the installation of footings, and retaining walls.

The project was highly successful and provided a new and professional hardstand facility fit for purpose.

OUR TEAM

Anthony Giugni | Managing Director

Anthony has over 20 years' experience within the construction industry, holding a degree in Construction Management and his medium builders' license.
